

Abstract Of The Disclosure

5 A multi-sectional novelty device seat cushion, and method for
manufacturing the same. The multi-sectional novelty device includes a plurality
of seat cushion sections, including at least a first seat cushion section and a
second seat cushion section, and an attaching mechanism. The first seat cushion
section includes a non-linear first border, and the second seat cushion section
includes a non-linear second border,. The first border and the second border
10 tessellate. The attaching medium is affixed to the first seat cushion section at the
first border, and the attaching medium is preferably affixed to the second seat
cushion section at the second border. The first seat cushion section and the
second seat cushion section optionally include handles.
